

TECHSTONE

MICROCEMENT

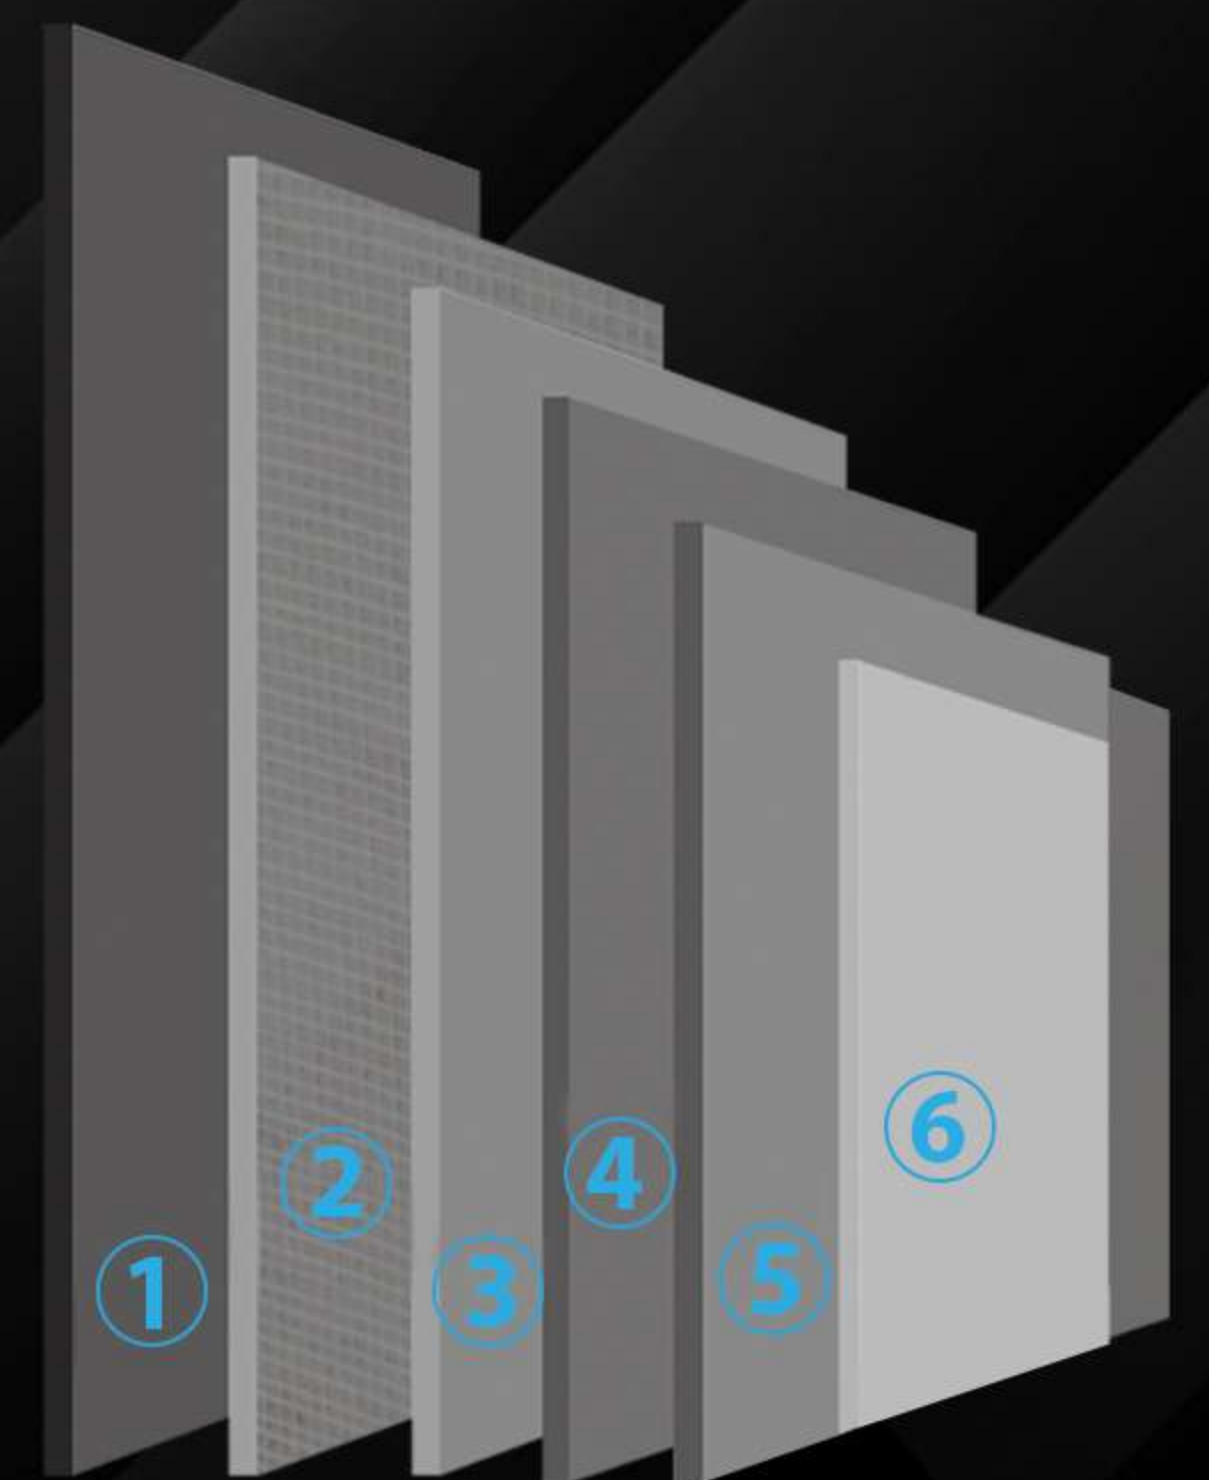

Microcement Coating is a decorative coating composed of silicate cement, additives, and mineral pigments. It is an inorganic ecological product with cement as the main binder, designed to provide excellent adhesion, durability, and versatility. This modern finishing material conforms to contemporary architecture's simple, unadorned design and aesthetic feeling while offering a seamless and elegant surface for floors, walls, and furniture.

Reference Dosage

Product Structure

- 01 Leveling Layer
- 02 Crack-proof Layer
- 03 Primed hardened Layer
- 04 Effect Layer
- 05 Waterproof closed Layer
- 06 Protect topcoat Layer

Product Application

Microcement's unique properties make it suitable for both interior and exterior applications. It can be applied to exterior walls to achieve elegant and modern architectural designs.
