

TECHSTONE

MINERAL SAND FLOORING

Mineral Sand Flooring is crafted from high-quality silicone acrylic emulsion combined with fine sand and advanced additives, delivering a luxurious finish with classic European sophistication. Engineered for both durability and visual appeal, it provides outstanding crack resistance, flexibility, and long-lasting protection. This eco-friendly architectural sand coating is suitable for interior and exterior use, offering a high quality texture and luminous look that enhances any environment.

Technical Specification

-  Surface Dying Time ----- 24 hours
-  Spreading Rate ----- 3 - 3.5kg/m²
-  Thickness ----- 1.5 - 2mm/main coat
-  Package Specification ----- 5kg & 20kg/bucket

Standard Application

- 01** Ensure that the floor has no cracks, fully dry, even, and clean.
- 02** Apply a surface primer that is compatible with the flooring substrate.
- 03** First, draft a line for the desired design joint and fill it in with the desired color paint. (Optional)
- 04** Put masking tape to secure the design joint during the process of applying the pattern coat. (Optional)
- 05** Apply the first coat of main coat.
- 06** Allow surface to dry and flatten the surface using a flat trowel.
- 07** After flattening the surface, apply the second coating.
- 08** Gently remove the masking tape to reveal the design joint (Optional).
- 09** For the final step, apply the mixed top coat + hardener for the protection and long-lasting durability of the coating.

Product Features

-  Highly Durable
-  10 - 15 years life span
-  Self-cleaning
-  Adaptive design
-  Excellent coverage
-  Resist fading
-  Resist mildew
-  Prevents UV damage
